

CICIND

Manual for Inspection and Maintenance
of
Brickwork and Concrete Chimneys
February 1993

COMITÉ INTERNATIONAL DES CHIMINÉES INDUSTRIELLES
INTERNATIONAL COMMITTEE ON INDUSTRIAL CHIMNEYS
INTERNATIONALER AUSSCHUSS FÜR INDUSTRIESCHORNSTEINE

CONTENTS

1. Introduction	3	10. Maintenance advice	34
2. Scope	4	10.1 Information required	
3. Field of application	4	10.2 Contents of the maintenance- advice	
4. References	5	10.3 Example	
5. Notations	5	10.4 Aspects of the contract	
6. General chimney-data	6	10.5 Demolition of chimneys	
6.1 Chimney characteristics		11. Repairs	37
6.2 Types of chimney considered		11.1 General	
6.3 Inspection characteristics		11.2 Pre-treatment of the substrate	
6.4 Maintenance characteristics		11.3 Repair of specific parts	
7. Materials		11.4 Execution aspects	
7.1 General.....	11	11.5 Execution limitations	
7.2 Reinforced concrete		11.6 Time scheduling	
7.3 Masonry		Annex 1 Chimney record book.....	49
7.4 Mortars		Annex 2 Demolition of Chimneys.....	62
7.5 Steel		Annex 3 Drying, preheating and cooling of chimneys for maintenance process stoppages and shut-downs.....	75
7.6 Insulation		Annex 4 Structural measures, connected with change in operation, installation of equipment for the desulphurisation of the flue-gases, etc.....	77
7.7 Coatings		Annex 5 Built-in provisions on behalf of inspection and maintenance work of chimneys.....	80
7.8 Materials for the repair of concrete		Annex 6 Dutch safety instructions for execution of work.....	81
8. Damage	20	Annex 7 Example of a chimney repair specification.....	82
8.1 General		Annex 8 Straightening of bent brickwork chimneys.....	85
8.2 Damage to concrete		Annex 9 Adjustment of damaged expansion joints in brickwork linings.....	85
8.3 Damage to brickwork			
8.4 Damage to steel			
8.5 Damage to insulation			
8.6 Damage to coatings			
9. Inspection	24		
9.1 General			
9.2 Inspection methods			
9.3 Preparing for inspection work			
9.4 Parts to be inspected			
9.5 Inspection observations			
9.6 Reporting

1. INTRODUCTION

— When CICIND began drafting the model codes for the design of concrete and steel chimneys, the Dutch study group realised there was also a need for a manual for chimney-users for inspection and maintenance of large industrial chimneys. There did not seem to be any existing directly relevant literature, covering techniques, experience and recommendations for these activities.

— The manual is intended to provide useful information organised in a way helpful for the inspection and maintenance of Chimneys.

It represents the current knowledge and is complemented by appendices and a list of relevant literature. (See chapter 4)

— New developments in this area are constantly taking place.

Therefore this manual is provided in a loose-leaf format, which enables easy additions and corrections.

— Any questions about the contents, should be directed to the Secretary of the Dutch Chimney Study-Group, Ing. R.M. Biesheuvel, Gemeentewerken Rotterdam. Ingenieursburo Utiliteitsbouw, Postbus 6633, 3002 AP Rotterdam. The Netherlands, tel 010-4894279 (national).

— The contributors to this manual are not to be held responsible for any failure alleged or proved to be due to adherence to recommendations or use of information published here or in any later addition or correction of this document.

— The following people have cooperated in producing this manual:

L. van Chastelet	- The Netherlands
J. J. Heyenga	- The Netherlands
L. Langhorst	- The Netherlands
R. M. Biesheuvel	- The Netherlands (Secretary)
H. G. Harmsen	- The Netherlands
G. Thoraval	- France (Part-time)
E. Schnark	- Germany (Part-time)
F. Henseler	- Germany (Part-time)
